

Installation Documentation

This note records the current project setup for the browser dashboard and the workflow it drives.

Required tools

- Miniconda or Anaconda for the Python workflow
- Node.js 20 LTS or newer for the Next.js vizualizer
- Git for the repository itself

Install the dashboard

```
cd vizualizer  
npm install
```

Install the Python environment

```
conda env create -f envs/environment.yaml -n pypsa  
conda activate pypsa
```

If Python 3.13 is selected, apply the current fix:

```
conda run -n pypsa pip install "google-cloud-storage>=2.10"
```

Download workflow data

```
cd personal_data_download  
python download_cutout.py  
python download_zenodo_files.py
```

Environment variables used by the dashboard

- `PLANUI_CONDA_ENV` - force a named conda environment such as `pypsa`
- `PLANUI_CONDA_PREFIX` - force a conda prefix path
- `PLANUI_SNAKEMAKE_SKIP_REMOTE_CHECKS` - disable the default Snakemake remote-check skip flag
- `PLANUI_USE_SYSTEM_PROXY` - keep proxy variables when spawning subprocesses

Build and start

```
cd vizualizer  
npm run build  
npm start
```
